

RMTM Neon

“RM have re-imagined the tools that schools need to **pro-actively monitor, report and maintain** a school’s unique systems.”

www.rmneon.com

How RM[™] Neon could benefit your school... The Top 5

1 Be in control at all times

Now you can view and manage a variety of systems, devices and users from anywhere, using just an internet browser on any device. Quickly and easily monitor any critical data and metrics through one interface to check the overall health of your network and IT systems.

2 Improved efficiency across the school...

Give staff the ability to quickly and easily carry out their own common user management tasks e.g. giving teachers or support staff the ability to change passwords and other basic routine tasks, setting you free for the complicated stuff!

3 Early troubleshooting

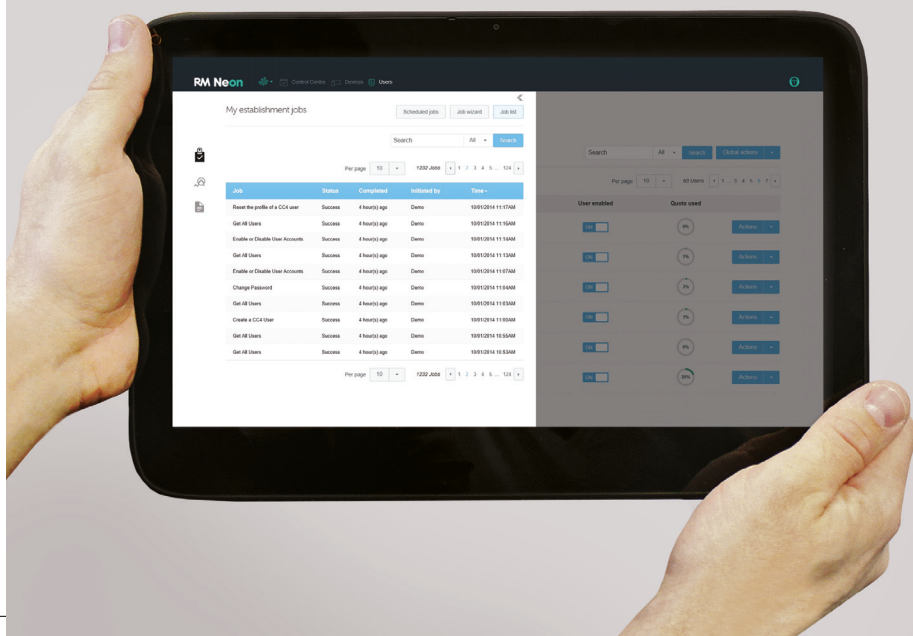

With everything visible in one place, RM Neon enables you to quickly detect, diagnose, troubleshoot, and prevent any issues even before they become visible to others. This could significantly save your school time, money and disruption.

4 Instant access to technical experts

The RM Neon Community is the place to collaborate and share ideas, tap into other technical experts and access scripts to help with managing your day to day network tasks.

5 Informed planning

All staff can view their own personalised set of flightdecks that contains valuable data, enabling them to track any trends e.g. increased bandwidth usage, disk space, number and variety of pupil owned devices. This can be used to build a business case for investing in new technology because the impact is instantly measurable.

**“ Intelligent, reporting, alerting,
cloud-based, community -
it's got everything!”**
